

NATIONAL SAFETY COUNCIL

LOCATION: Itasca, IL

SPACE: 10,575 square ft.

SCOPE: Provide space planning, materials and finishes package, accent lighting, furniture solutions & construction project management.

THE PROBLEM: National Safety Council came to Vertical Interior Design looking to improve the break area, lounge and training spaces for their employees. They wanted the multipurpose space to be inviting and keep their employees happy.

THE SOLUTION: Vertical Interior Design provided the company with space planning, finishes and furniture. In addition, our team opened up the dividing walls to create a welcoming break room and reworked their current training rooms to allow more light in. We created a chalk board wall near the coffee bar for employees to write notes during break time. To reuse National Safety Council's vending machines, the team incorporated that into a new cabinetry layout as well as custom benches along the windows for another type of meeting area.

FURNITURE COST PER SQ FT: \$12
