

Northwestern Medicine – Heart Center

LOCATION: McHenry, IL

SPACE: 4,000 square ft.

SCOPE: Renovation and interior design of the Heart Center at the McHenry campus. Finish selection, space planning, healthcare design, and drawings were provided to enhance the patients' care while maintaining facility safety and productivity.

THE PROBLEM: Northwestern Medicine came to Vertical Interior Design looking to improve their lobby, nurse's station, and break room for their staff and patients. The Heart Center had not been renovated for over 10 years, so they wanted to update it to create a more healing environment.

THE SOLUTION: Vertical Interior Design provided the company with space planning, finishes, flooring and furniture as well as millwork drawings after taking into consideration the work flow and what the company wanted to see in this renovation. As a result, we created consult rooms in the lobby area and a redesign of the nurse's station, break room, locker rooms and department conference room.

TESTIMONIAL: "We collaborated with Vertical Interior Design on the needs of the areas. Once the design was approved, VID coordinated all the finishes with our contractor. The project was given a tight schedule but was all done on time. ROI manufactured the millwork and with VID's finish selections the area was transformed." - Dylan DeGraw

FURNITURE COST PER SQ FT: \$12
